DETAILED ACTION

This Application has been examined. The original claims 1-4 are pending. The examination results are as follows.

Information Disclosure Statement

1. The examiner has considered the document listed in form PTO-1449 submitted with the Information Disclosure Statement (IDS) received 6/30/03 (see the attached form PTO-1449).

Allowable Subject Matter

2. Claims 1-4 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a flat panel display device and method for processing moving image data and still image data. Each independent claims 1 and 3 identifies the uniquely distinct features: "assign(ing) as write frames at least initial two frame following the completion of the switching ...in order to allow still image data to be written to the digital memory (18)" and "at least one of the rise times of a memory control signal supplied to the switch circuit (17) and a common signal supplied to the common electrode (15) is made longer than vertical blanking period immediately following the completion of the typical display" (see Figs. 3 and 4). The closest prior art, the Tamura document (U.S. Publication No. 2002/0011998), and the Sato patent (U.S. Patent No. 5,712,652) disclose conventional flat panel display devices and methods for processing moving image data and still image data, either singularly or in combination, fails to

anticipate or render the above underlined limitations, which are in combination with other claimed limitations, obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

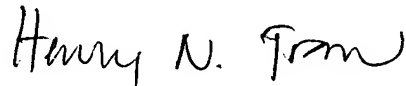

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They are U.S. Patents Nos.: 6,940,483 to Maeda et al, 6,784,878 to Hanari et al, 6,778,162 to Kimura et al, and 6,771,247 to Sato et al., which teaches flat panel display systems and methods for processing moving image data and still image data.
